HEALTHCAROLOGY

Account Types, Roles, and Access

Reference guide for administrators and portal operators

Verified against the configured role catalog and access model on 2026-08-31. A role does not by itself prove access to every record: facility, department, jurisdiction, client-group, and active-membership scope still applies.

How access levels work

- Level 0 is patient self-service and explicitly delegated family access.
- Levels 1-2 cover registration, billing, support, public-health administration, laboratory, imaging, and therapy operations.
- Level 3 covers clinical care and clinical/public-health analysis.
- Levels 4-6 cover records, privacy, technical administration, executive reporting, and break-glass administration.
- Facility, jurisdiction, and client-group scope still applies.

Access level 0

Account type	Documented role access
Patient (Portal)	Own chart and explicitly delegated family records

Access level 1

Account type	Documented role access
Billing / Coder	Claims, coding, insurance, and financial records
Healthcarology Agent	Creates and supports facilities for Healthcarology
Registration / Front Desk	Demographics, insurance, and scheduling

Access level 2

Account type	Documented role access
Health Department Administrator	Jurisdiction-scoped public health oversight
Laboratory Technician	Lab orders, specimens, and results
Radiology Technician	Imaging orders and reports
Therapist	Department-scoped therapy notes and plans

Access level 3

Account type	Documented role access
Advanced Practice (NP/PA)	Clinical access and prescribing per scope
Case Manager / Social Work	Care plans, discharge planning, and social notes
Health Department Analyst	Jurisdiction reporting and authorized drill-down
Laboratory Supervisor	Validates laboratory results before release
Nurse (RN/LPN)	Medication administration, vitals, nursing notes, and care plans

Account type	Documented role access
Pharmacist	Medication profiles, interactions, verification, and orders
Attending Physician	Full chart, notes, orders, medications, and discharge
Resident / Fellow	Clinical access with supervised prescribing

Access level 4

Account type	Documented role access
Community Moderator	Moderates assigned communities
Compliance / Privacy	Investigations, audit logs, and legal review
HIM / Medical Records	Chart compliance, correction, and release of information
Support Team Member	Works tickets directed to an assigned support group

Access level 5

Account type	Documented role access
Clinical Informatics	EHR workflow, template, and configuration oversight
IT Support	Troubleshooting with limited patient access
System Administrator	Backend, logs, provisioning, and monitored technical access

Access level 6

Account type	Documented role access
Executive Leadership	Aggregated clinical, operational, and financial dashboards
Root Administrator	Break-glass infrastructure and platform administration

Important interpretation notes

• Full chart or clinical access remains subject to facility and workflow authorization.

• Aggregated dashboards do not mean unrestricted patient-level access.

• Break-glass access should be auditable and tightly controlled.

• At verification, production had two users: one Root Administrator and one System Administrator. No explicit usernames, health-department memberships, or client-group memberships were assigned.
